

JACKSON MATIVO

00100,Nairobi, kenya.

+254702188406 jacksonmativo21@gmail.com [LinkedIn](#) [Github](#) [PORTFOLIO](#)

Cybersecurity Specialist | Software Engineer, & bug bounty hunter | API Security, React.js,Python, Jenkins

Education

Cisco Networking Academy CCNA, CYBER OPS, NETWORK SECURITY, CCNP ENCOR, CYBER SECURITY	MARCH,2023-AUG-2024
Moringa School SOFTWARE ENGINEERING	Feb,2025-AUG-2025

Cybersecurity Specialist and Software Engineer I with hands-on experience in corporate security at Safaricom Kenya, specializing in vulnerability assessments, API security testing, and compliance audits.developed PII ShieldPad, an innovative privacy-first application for secure AI interactions.Leveraging six years of self-taught architectural design experience in problem-solving, project management, and creative thinking to approach security challenges with a fresh perspective.

Trainings

proffesional cloud security engineer Google cloud	certified cybersecurity ISC2	burpsuite Portswigger
---	--	---------------------------------

TECHNICAL SKILLS

Cybersecurity & Cloud

- VAPT (Vulnerability Assessment & Penetration Testing)
- API Security Testing
- Web Application Security
- SIEM (Security Information and Event Management)
- Security Compliance Audits
- Risk & Compliance Assessment
- Identity & Access Management (IAM), VPC, GKE, Cloud Armor (Google Cloud)
- Infrastructure Testing
- Application Threat modeling

Tools & Platforms

- Security & Testing: Burp Suite, Nexpose, Kali Linux, InsightVM, OWASP Top 10, Postman, GDPR, iso 27001, AIM
- DevOps & CI/CD: Jenkins, CI/CD Pipeline, Docker, Kubernetes,flake8, black, SAST, DAST
- Cloud & Infrastructure: Google Cloud, AWS, Linux
- Collaboration & Project Management: Confluence, Jira, clickup
- Development & Design: Git, Flask, PostgreSQL, Figma, AI,Terraform, CloudFormation,GraphQL and REST API

Programming & Scripting

- Python, JavaScript, HTML5, CSS3, C#, React.js, Tailwind CSS, Bash, Bootstrap , GO, TypeScript and Next.js

EXPERIENCE

Cybersecurity Intern

Safaricom – Cybersecurity Assurance

March 2024 – September 2024

- Conducted penetration testing on infrastructure, applications, APIs, and networks, identifying critical vulnerabilities in 20+ APIs and 3 websites.
- Assessed 10 production databases for security flaws and supported remediation in line with SPDA (Security and Privacy by Design Assurance) standards.
- Improved CI/CD pipeline security by integrating automated security checks aligned with secure software development lifecycle (SSDL) practices.
- Applied both automated and manual security testing techniques using tools such as Burp Suite and Metasploit to simulate real-world attack scenarios.

Bug Bounty Hunter

HackerOne

2025 – Present

Discovered a high-impact clickjacking flaw that enabled UI redressing against a financial service provider; documented exploit path, crafted PoC, and submitted responsible disclosure.

Architectural Designer (Freelance)

Self-Employed (2018 – 2025)

- Designed residential and commercial buildings for clients across multiple counties in Kenya.
- Managed end-to-end design processes, demonstrating planning, creativity, and project delivery.

PROJECTS & TRAINING HIGHLIGHTS

- PIIShieldPad** – a privacy-first notepad application I build for secure AI interactions. It enables users to paste content containing Personally Identifiable Information (PII)—such as names, emails, or phone numbers—and anonymize it in real-time using regex-based PII detection
- SiteOrigin Checker**- A browser extension that evaluates the authenticity and trustworthiness of websites by analyzing domain age, SSL/TLS certificates, and computing a composite trust score. Utilized Flask (backend) and JavaScript (frontend) to deliver real-time analysis and seamless browser integration. Implemented Redis caching to optimize performance, reduce redundant lookups, and enable faster real-time analysis.
- Network Digital Twin** - Master's Research Collaboration. Contributed to the development of a Behavioral AI-Driven Network Digital Twin that mirrors real network environments to simulate and analyze traffic behavior without impacting production systems. The platform leverages AI/ML-based anomaly detection to identify reconnaissance, DPI-style activity, and emerging threat patterns using metadata and flow analysis (privacy-preserving, no payload inspection).
